Mammut 350

Heavy-Duty Formwork
Mammut 350

Thinking big with Mammut

Full-surface concrete load capacity up to 100 kN/m²

Through its pioneering development in the 1980s of the large-scale, modular, panelised formwork system known as Mammut, MEVA opened up a whole new dimension in formwork efficiency.

Delivering the optimum combination of cost-effectiveness and flexibility for industrial construction and civil engineering, the Mammut product family regularly sets new benchmarks in the formwork market. The outstanding feature of Mammut 350 is its ability to accommodate fresh concrete pressures of up to 100 kN/m² over the entire surface.
Simply smart

Mammut 350 heavy-duty formwork

- **Size**
  - Up to 8.75 m² contact area per panel (350 x 250 cm)
  - For storey heights up to 350 cm without vertical extension

- **Capacity**
  - Permissible fresh concrete pressure (to DIN 18218) over entire surface of 100 kN/m² (DIN 18202, Tab. 3, Line 7)

- **Universal application in industrial construction and civil engineering**

- **Closed hollow steel frame profile**
  - Structurally robust
  - Torsion-proof
  - Hot-dip galvanised to facilitate cleaning and reduce concrete adhesion

- **Smart multifunctional profile**
  - Welded-in Dywidag nuts
  - All accessories, e.g. brackets, push-pull props and alignment rails, attached with MEVA flange screw

- **Tying for inclined or stepped-level formwork**
  - Tie hole with conical steel anchor sleeve, welded in from both sides

- **Intelligent MEVA product design**
  - MEVA assembly lock for a structurally continuous connection with only a few hammer blows
  - Bump notches for panel widths of 125 cm and more to simplify adjustment and alignment with crow bar
  - High-quality alkus all-plastic facing with 7-year warranty

- **Compatible with Mammut XT**
  which combines three tying methods in a single system
Mammut 350

A wall full of ideas

MEVA quality in every detail

MEVA systems excel through their supreme standards of quality, efficiency and practical detailing. And the tried-and-tested Mammut 350 heavy-duty formwork is no exception. With standardised system components, a minimum of accessories and a closely tailored product range, it combines all the features that make MEVA systems the unbeatable solution for practical on-site operations.

Particular features of the Mammut 350 wall formwork panels include:
- Seven multi-function profiles for 350 cm high panels
- Tie holes level with multi-purpose profiles
- Regular tie hole and joint pattern
- Compatible with innovative Mammut XT system

![Flange screw](image)
Flange screw
Single component for strong connection of all accessories

![Multi-function profile](image)
Multi-function profile
Made from closed hollow steel profiles with welded-in DW 15 nuts for rapid, structurally continuous connection of accessories

![Tie hole](image)
Tie hole
With conical anchor sleeve, welded in from both sides

![Closed hollow profile](image)
Closed hollow profile
For high stability and a long service life

![Transport hole](image)
Transport hole
Designed to take the lifting hook 60 for rapid loading/unloading and movement of panel stacks

![Bump notch](image)
Bump notch
Fitted at four corners for panel widths of 125 cm and more to simplify adjustment and alignment with crow bar
alkus all-plastic facing
No water absorption, resistant to swelling and shrinkage. Smooth, robust surface guarantees a high-quality concrete finish, even after heavy use.

Compatible with flexible Mammut XT wall formwork system

Tie rod fixture
For fixing to multi-purpose profile of upright or horizontal Mammut 350 panels – for fast and safe transportation on site.

Hot-dip galvanised frame
Surface finish facilitates cleaning and reduces concrete adhesion

M assembly lock
Only one component needed for rapid, reliable panel connection: MEVA assembly lock. Allows single-handed fitting at any position along the frame. A few hammer blows suffice to achieve a strong, level and stepless panel connection.

alkus all-plastic facing
7 Year Long-Term Warranty ON THE ALL-PLASTIC FACING
Systematic symmetry

Panels and corners

For high flexibility

The wide range of Mammut 350 panels ensures prompt and flexible formwork assembly for rapid progress on site. All panels can be set in an upright or horizontal position to ensure easy adaptation to specific layout geometries. The system offers a particularly cost-effective solution on projects with varying storey heights, e.g. residential or commercial buildings with basement car parks.

- Panel heights of 350, 300, 250 and 125 cm
- Panel widths from 250 to 25 cm
- 90° inside and outside corners
- Hinged corners continuously adjustable between 60 and 180°, with locking device for frequently recurring angles
- All corner configurations formed with standard corner panels

Large-scale formwork

Mammut 350 saves time

Rapid progress

Mammut 350 is easy to set up and allows unlimited pour speeds for heights of up to 4 m. Large formats, with a maximum of 8.75 m² per panel, ensure rapid progress of work on site. Storey heights of up to 350 cm can be cast with a single panel, with no need for vertical extension.
Concrete pressure

Mammut 350 honours its promises

Top performance

Accommodating maximum permissible fresh concrete pressures of 100 kN/m², Mammut 350 offers outstandingly short pour times due to the unlimited speeds possible for concrete lifts of up to 4 m. Panel widths of 100 cm or more require the use of DW 20 tie rods.

Only two ties are needed for heights up to 3 m and three for heights up to 3.50 m.

True architectural quality

Ideal for fair-faced concrete

Harmonious results

Mammut 350 offers the ideal solution in meeting the diverse requirements placed on fair-faced concrete. The visual impact achieved by the alkus all-plastic facing, in conjunction with the symmetrical tie and joint pattern, ensures that – whatever the specified grade of fair-faced concrete – the system significantly enhances the overall architectural appeal of any project.
SecuritBasic

Cost-effective all-in system

Modular safety

This safety system with a working platform is easy to install using a single component – the flange screw. A loadbearing capacity of up to 200 kg/m² guarantees start-to-finish safety throughout the assembly and concreting operations.
Pioneer and trendsetter

More with MEVA

Formwork. Simple. Smart.

A lot of things that are now considered to be standard in the formwork industry were developed by MEVA in HaIterbach. As a trendsetter for the entire industry, we work day in and day out with great élan to make formwork even safer, more efficient and easier to use for the end user. For us, the excellent quality of our products and technology is a matter of course.

We are independent, family-run and committed to the values of a medium-sized company in everything we do. That is why our customers may rightly expect not only technologically superior products but also comprehensive, personal commitment to projects all around the world.

Complex special formwork or economical standard formwork: Our experience and wide range of products make us a service partner with strong consulting skills, even for the sophisticated challenges construction professionals have to master nowadays.
Formwork.
Simple. Smart.
You can rely on us wherever you are.

With 40 offices on 5 continents, we are on the spot wherever you need us.
